

Muhammad Salah Elsayed

Business Intelligence Analyst | Power BI | SQL | Python

Egypt • ms.elsayed77@gmail.com • +20 108 024 2780 • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

PROFESSIONAL SUMMARY

Detail-oriented BI Analyst skilled in complex SQL, ETL processes, and Power BI reporting, with a focus on turning messy data into clean, business-ready insights. Eager to grow in marketing analytics and e-commerce, with a track record of independently delivering projects from raw data to actionable dashboards, and a leadership experience that proves I perform when it counts.

TECHNICAL SKILLS

Business Intelligence: Power BI (Advanced DAX, Power Query), Dashboard Design, KPI Tracking, Automated Reporting

Data Analysis & Modeling: ETL Processes, Data Cleaning, Statistical Analysis, Data Visualization

Programming: Python (Pandas, NumPy, Matplotlib, BeautifulSoup), SQL (Complex Queries, Data Extraction)

Spreadsheets & Automation: Advanced Excel (Pivot Tables, Power Query, VLOOKUP), n8n Workflow Automation

Soft Skills: Team Leadership, Stakeholder Communication, Independent Problem-Solving

PROJECTS & EXPERIENCE

Banking Loan Analysis Dashboard | *Power BI · DAX · Power Query*

- Designed a multi-page Power BI dashboard analyzing 38,576 loan applications totaling \$435M+, covering KPIs such as MTD/MOM trends, average interest rate (12.05%), and debt-to-income ratio across loan status categories.
- Built advanced DAX measures and dynamic slicers (Year, State, Purpose) that revealed 86.18% of loans in good standing and identified debt consolidation as the top loan purpose with 18.2K applications.
- Delivered actionable portfolio risk insights by segmenting borrowers across home ownership, employment length, and geography — enabling stakeholders to optimize loan approval strategies.

LinkedIn Jobs Market Analysis | *Python · Power BI · n8n · BeautifulSoup*

- Built an automated job scraper using Python (BeautifulSoup & Pandas) that collected and structured 240 job postings across 72 companies, 26 locations, and 2 countries, with cleaned data stored in CSV format for downstream analysis.
- Developed an interactive Power BI dashboard to visualize job market trends, uncovering a 4x surge in Data Analyst postings from July to September (28 → 116 jobs), with dynamic slicers for Country, Location, Job Title, and Company.
- Integrated the scraping pipeline with n8n workflow automation for fully scheduled, hands-free data collection — eliminating manual intervention and ensuring continuously updated, analysis-ready datasets.

Data Analytics Internship — DEPI (Digital Egypt Pioneers Initiative) | *Python · SQL · Power BI · n8n*

- Completed a 6-month government-backed Data Analytics scholarship, gaining practical experience across the full data workflow: collection, cleaning, transformation, and visualization using Python, SQL, Power BI, and n8n.
 - Appointed Team Leader for the program's final project — coordinated task distribution, managed deliverables across team members, and ensured on-time completion under real project conditions.
 - Continued advancing independently after the program by self-building advanced projects, demonstrating strong initiative and commitment to continuous professional growth.
-

EDUCATION

Bachelor's Degree in Commerce — Aswan University
